

# FACADE RASP **TYTANX PROFESSIONAL**

## **A NEW TOOL ON THE MARKET!**

### **Facade Rasp TytanX Professional**

---

it is a new product in the line of professional tools  
and another original project of our innovation department.

Polystyrene rasps were associated  
only with classic trowels in standard sizes  
Not anymore!

### **Our new revolutionary tool is a game changer!**

---

Now, leveling large surfaces  
will be quicker and more precise.

We are certain that thanks to its features,  
the facade rasp will gain popularity  
among professionals.

# FACADE RASP

## TYTANX PROFESSIONAL

**The rasp** is made of two elements: **a replaceable rasp blade** and **a profile**.  
With the **various profile length**, we can achieve a perfectly straight surface  
over a large area, leading to **reduce glue usage**.  
**Ensures less effort** and **shorter working time**

Uncapped aluminum,  
anodized profile enables  
free flow of the  
scraped material

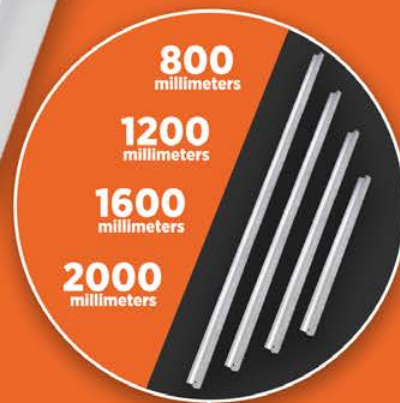

Replaceable  
rasp blade  
**400 mm**

product  
code:

**276-0040**

Replaceable blade,  
made of galvanized  
metal sheet

Available in 4 sizes  
which makes it possible  
to work on either large or small  
surfaces with more efficiency

Product code/Lenght

**276-4080**

**800**  
millimeters

**276-4120**

**1200**  
millimeters

**276-4160**

**1600**  
millimeters

**276-4200**

**2000**

## Facade Rasp TytanX Professional a new tool on the market!

---

Rasps in construction work are primary used for shaping and smoothing rough surfaces in material like polystyrene. They are particularly useful for thermal insulation of buildings.

Our offer includes several different types of rasps.

Keeping in mind our customer's needs, we have designed a new type of rasp, the **Facade Rasp TytanX Professional**. The main advantage of our tool is the possibility of leveling the large surface quick with less labore force.

**It allows to better preparation of the material before finishing layer what results in less glue consumption.**

## The designed and visual aspects of the Facade Rasp TytanX Professional

The **Facade Rasp TytanX Professional** profile is **made of silver anodized aluminum**. Anodizing the aluminum profile creates a coating with increased resistance to dirt, abrasion, as well as durability and aesthetic appearance of the element.

The metal blade is mounted on an aluminum profile. **The rasp's profile is not plugged. This ensures a free flow of the scraped material.**

Workin with the facade rasp you will never have to worry about the clogging problem. Thanks to this, your work will be more efficient and effective.

The facade rasp is marked with engraved logo like every other tool from TytanX.

## Facade Rasp – comfort and precision of work on a larger surface

---

The **TytanX Professional Facade Rasp**, has many more features than a typical polystyrene rasp. **It is strong, stiff and perfectly straight.**

This ensures precise leveling of polystyrene boards with shorten rubbing time and reduced effort during work.

**The shape of the profile allows you to check the evenness of the surface immediately without using a level.**

The main advantages of the tool:

- possibility of obtaining a perfectly straight surface on a large wall
- shorter working time
- less effort during work
- lower glue consumption
